TruEvent Horizons

Event Planning Management System

CS – 41

Feedback from the Panel

After going through the project proposal and the project proposal presentation, the following feedbacks were given to us by the panel;

1. Since our project is an event planning management system, initial idea was to focus on all types of events and help the customers to find out the perfect service providers to plan out their event. But as per the questions raised by the panel, we found out that the system cannot be used to facilitate all types of events. The panel explained us thoroughly, the drawbacks and issues that could arise when planning a "wedding" through our system. Their suggestions and feedbacks were to drop out the wedding planning part from our system and move on with other type of events such as birthday parties, farewell parties, batch parties, get togethers, etc.
2. Since wedding type of events are planned out years beforehand, the schedule and the timeliness of those events affect our system schedule and timeliness as well, when it comes to displaying the schedules to the users. That can affect our operational and scheduling feasibility areas when developing the project.

Actions taken on the feedback

we do 100% agree on the feedback and we found out the flows our system has when it comes to planning out a wedding through our system.

Therefore, agreeing and going by the suggestions from the evaluation panel, **we are excluding wedding planning aspect from our event planning management system and continuing with the other type of events.**

By taking those actions, we hope to resolve the issues under the sections of *Problem Statement* and *Feasibility Study (Operational and Schedule)*.
